

NASIFUL ALAM

Full-Stack Developer

Chattogram, Bangladesh | nasif@niruddeshjatra.space | +8801626-181662 | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

Summary

Full-stack developer with production experience in Django, React, and Node.js, having shipped a rental marketplace, client event platforms, and internal business tools end to end. Comfortable owning a feature from database schema through deployment on AWS. Seeking a backend or full-stack role on systems with real complexity in them — state, money, and permissions.

Professional Experience

Associate Software Engineer, Intellectify.io

Aug 2025 – Apr 2026

- Built and maintained three production Django applications: shop management, e-commerce bookshop, and turf booking.
- Developed a mentorship booking platform with Node.js, Express, PostgreSQL, and Prisma on a React 19 + TypeScript frontend.
- Built a maker-checker payout approval flow requiring separate users to create and authorize financial transactions.
- Deployed a Django + Nginx application on AWS EC2 with S3, CloudFront, and CloudWatch logging.

Projects

Bhara — Rental Marketplace | Live Platform | Client | Server

Django REST · PostgreSQL · Redis · Celery · React

Rental platform where company acts as custodial intermediary, holding item and the security deposit until rental completes.

- Enforced an 8-state rental lifecycle through an explicit transition table with database locks preventing double-booking.
- Built phone/OTP authentication with brute-force lockout, JWT rotation, and a three-tier user verification model.
- Offloaded SMS dispatch and notification retries to Celery workers; cut duplicate queries via composite indexes.

Chattogram Duathlon Registration Portal | Live | GitHub

React · TypeScript · Astro · PostgreSQL · Tailwind CSS

Registration & admin system built for Triathlon Bangladesh, handling athlete signups and manual mobile-banking payment verification.

- Routed all public writes through PostgreSQL SECURITY DEFINER procedures behind Row Level Security, with no direct table access.
- Prevented slot overselling under launch-day load using PostgreSQL advisory transaction locks.
- Built an admin dashboard with live registration stats and .xlsx export formatted for jersey production and timing partners.

ArcZero — Browser Physics Game | Live | Github

Vanilla JS · HTML5 Canvas · Supabase · Playwright

Trajectory-based arcade game running on a 2D ballistic physics engine written from scratch, with no game library.

- Implemented a deterministic fixed-timestep physics loop for identical behaviour across variable display refresh rates.
- Secured leaderboard submissions with HMAC-SHA256 tokens and server-side plausibility checks in Supabase Edge Functions.
- Covered physics equations with Vitest unit tests and mobile touch controls with Playwright E2E suites.

Skills

Languages/Frameworks: Python, TypeScript, JavaScript, React, SQL, C, Django, Django REST, Node.js, Express.js, Tailwind CSS

Cloud/DevOps: AWS (EC2, S3, RDS, CloudFront), Docker, Nginx, Redis, Celery, GitHub Actions

Databases/Tools: PostgreSQL, MySQL, MongoDB, Supabase, Prisma, Git, Vite

Education

Chittagong University of Engineering & Technology, BSc in Computer Science

Feb 2017 – May 2022

Extra-curricular

- Solved 1500+ data structure and algorithm problems across competitive programming platforms.
- Write technical articles on computer systems in Bangla and English at my site; 8-part series on hardware fundamentals published.

Languages: Bangla (Native) · English (Full professional proficiency)
